

Maintenance

Congratulations on the purchase of this Pneuman panel, produced and delivered with the greatest care. Please check the panel for damage. If necessary please do not hesitate to contact us.

A Pneuman panel is almost entirely made up of maintenance-free components. For cleaning and inspection to ensure a long life we have the following tips:

Housing and front

Use a soft moist cloth with a mild detergent, definitely not solvents or abrasives. An appropriate glass cleaner can be used on the window (on vandal-proof and outdoor panels).

Interior

Only qualified technicians can perform maintenance and inspection of power cables, electrical components and internal wiring.

Outdoor panels

Half-yearly cleaning is recommended on ventilation and drainage grates. The required maintenance can be performed by the user himself. Thermostat and heating operation should be annually monitored by a qualified technician.
